## EDUCATION

**Software Engineer**
Togliatti College of Social Economics
2006 — 2010

## SKILLS

- **Project management:** planning, retrospectives, post-mortems, hybrid agile methodologies
- **Tools:** Jira, Confluence, Miro, Grafana, Jenkins
- **Processes:** LiveOps, content delivery, cross-team collaboration
- **People:** hiring, onboarding, building QA and GD teams
- **QA:** test planning, release quality control, mobile and PC games
- **Languages:** English — B1 (improving)

## ABOUT

9+ years in gamedev, working my way up from QA to team lead and production roles. Specialized in LiveOps and cross-functional coordination — maintained continuity during the Wargaming/Lesta split in 2022, rebuilding processes and pipelines from scratch without stopping releases or new feature and content development. Delivered 12 releases per year on World of Warships, managing teams and driving collaboration across departments. Independently developed and published several games — with hands-on experience across the full product cycle from concept to launch.

## EXPERIENCE

**Content Operations Team Lead — Lesta Games**
November 2022 — June 2025 Saint Petersburg

- Led a team of 6 (QA and GD) within the LiveOps direction on World of Warships, coordinating delivery across 50+ cross-functional contributors in publishing, development, and art directions; ensured per-version delivery of game content and activities across 12 releases per year, including seasonal and holiday campaigns.

- Built a hybrid task management process (planning, retrospectives, post-mortems) and established clear content request workflows, reducing post-deadline changes and unplanned context-switching for development teams.
- Participated in cross-team planning of both new feature development and iteration on existing ones, collaborating with engineering, product management, and art teams.
- Independently conducted hiring and onboarding, built effective QA and GD teams, increasing the stability and quality of released content.
- Initiated metric coverage for a feature where analytics were insufficient, and engaged UX research (surveys and qualitative sessions). Collaborated with analysts and UX team to interpret findings and inform product decisions.

**QA Team Lead — Wargaming**
November 2021 — November 2022 Saint Petersburg

- Managed the QA team on World of Warships: coordinated update testing, distributed tasks, and built collaboration with engineering and product teams.
- Ensured release quality control: prioritized critical bugs, established content acceptance processes before launch.

**QA Specialist — Wargaming**
November 2018 — November 2021 Saint Petersburg

- Tested game content and updates for World of Warships, identifying critical defects before release.
- Collaborated with developers and the content team to resolve quality issues promptly.

**Software QA Team Lead — LLC JustMoby**
May 2016 — October 2018 Togliatti

- Led the QA team delivering mobile applications and games on Android and iOS.
- Established testing processes, distributed tasks across specialists, and collaborated with engineering and product teams.

## PERSONAL PROJECTS

Indie development solo: concept, game design, development, publishing.

**Gazifikatsiya** — line-drawing puzzle Yandex Games
**One Chance** — line-drawing puzzle Yandex Games
**In the Beginning Was a Photo** — "4 Pics 1 Word" genre Yandex Games
**Match-3 game** — published on Google Play (2022)
